GIS map compilations are also available from WERI for all other villages on Guam.

Kennedy Tolenoa (Research Assistant), using the Trimble Geo Explorer GPS to collect field data.

The Northern Guam Lagoon Aquifer (NGLA) supplies about 45% of Guam's population with potable water. Ensuring the distribution of water is essential to maintaining the health and well-being of the community. Therefore, it is important to continuously monitor and maintain the integrity of the NGLA to prevent contamination and maintain the quality of the water supply.
